

# UNITED STATES PATENT AND TRADEMARK OFFICE

UNITED STATES DEPARTMENT OF COMMERCE  
United States Patent and Trademark Office  
Address: COMMISSIONER FOR PATENTS  
P.O. Box 1450  
Alexandria, Virginia 22313-1450  
[www.uspto.gov](http://www.uspto.gov)

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/749,306	12/31/2003	Naimul Karim	59378US002	1782
32692	7590	05/18/2007	EXAMINER	
3M INNOVATIVE PROPERTIES COMPANY			KOEHLER, CHRISTOPHER M	
PO BOX 33427			ART UNIT	PAPER NUMBER
ST. PAUL, MN 55133-3427			3726	
NOTIFICATION DATE		DELIVERY MODE		
05/18/2007		ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

LegalUSDocketing@mmm.com  
LegalDocketing@mmm.com

**Office Action Summary**

Application No.	Applicant(s)	
10/749,306	KARIM ET AL.	
Examiner	Art Unit	
Christopher M. Koehler	3726	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) Responsive to communication(s) filed on 17 January 2007.
- 2a) This action is FINAL.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) Claim(s) 1-45 is/are pending in the application.
  - 4a) Of the above claim(s) 28-45 is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1-27 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    - 1. Certified copies of the priority documents have been received.
    - 2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- 4) Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) Notice of Informal Patent Application
- 6) Other: \_\_\_\_\_.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-7, 13-17 and 19-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Freilich et al. (US Patent No. 6,599,125).

#### Claim 1:

Freilich teaches a method of making a dental appliance comprising providing a dental mill blank comprising a substantially uncured, self-supporting hardenable organic composition (col. 6, lines 57-60); machining the mill blank into a substantially uncured shaped article; and at least partially curing the shaped article to provide a hardened dental appliance (col. 8, lines 10-25; col. 8, line 36-col. 10, line 8; col. 12, lines 40-60). Freilich teaches that the dental mill blank is only cured enough to be sufficiently machined and therefore inherently encompasses that the mill blank is uncured, partially cured, or fully cured depending on the material used to comprise the mill blank.

#### Claims 2-7 and 13-16:

Freilich teaches a suitable composition for dental mill blanks in col. 4, line 23-col. 6, line 15.

Claim 17:

Freilich teaches the addition of many elements to form a suitable composition for dental mill blanks as cited above. The addition of any of these materials to the overall composition will inherently change the viscosity of the overall composition.

Claim 19:

Freilich teaches that the dental mill blanks can be used for a variety of dental purposes (col. 13, lines 13-18).

Claims 20, 21 and 24-27:

Freilich teaches processing the hardened dental appliance in a variety of ways including polishing, which is to be considered a form of machining (col. 12, lines 31-34; col. 13, lines 9-13).

Claims 22-23:

Freilich teaches machining with a CAD/CAM device (col. 8, line 36-col. 9, line 2).

***Claim Rejections - 35 USC § 103***

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 1-27 are rejected under 35 U.S.C. 103(a) as being obvious over Freilich et al. (US Patent No. 6,599,125) in view of Karim et al. (USPGPUB 2003/0114553).

The applied reference (USPGPUB 2003/0114553) has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C.

103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Claim 1:

Freilich teaches a method of making a dental appliance comprising providing a dental mill blank comprising a substantially uncured, self-supporting hardenable organic composition (col. 6, lines 57-60); machining the mill blank into a substantially uncured shaped article; and at least partially curing the shaped article to provide a hardened dental appliance (col. 8, lines 10-25; col. 8, line 36-col. 10, line 8; col. 12, lines 40-60). Freilich teaches that the dental mill blank is only cured enough to be sufficiently machined and therefore inherently encompasses that the mill blank is uncured, partially cured, or fully cured depending on the material used to comprise the mill blank. In the event that applicant traverses this inherency applied to claim 1 above in view of Freilich,

Art Unit: 3726

claim 1 is alternatively rejected under Freilich in view of Karim to specifically identify a composition that is malleable in a substantially uncured state.

Karim teaches a hardenable self-supporting structure to be used in dental mill blanks. Karim teaches that this composition in its uncured state has rheological properties similar to waxes below the waxes' melting points in that they can be relatively easily deformed and exhibit low elastic recovery (paragraph [0042]) and is capable of being shaped by trimming, cutting, sculpting, grinding, etc (paragraph [0131]). Therefore, the composition of Karim is inherently suitable to be machined in a substantially uncured state.

It would have been obvious to one of ordinary skill in the art at the time of invention to use the material composition of Karim in the method of Freilich in order to produce a machined implant that is substantially uncured at the time of implantation into a patient so that the practitioner is capable of finish molding the implant at the moment of implantation to provide the most exact and comfortable fit for the patient. The combined embodiment for the purpose of examination of the depending claims is the method of Freilich utilizing the composition of Karim, therefore composition claims are addressed by Karim and method steps addressed by Freilich.

Claims 2-4:

Karim teaches that the composition is a composite material comprising a resin system, an initiator system and a filler system (paragraph [0039]).

Claims 5-10:

Art Unit: 3726

Karim teaches that the polymerizable resin system comprises a crystalline component (paragraphs [0056]-[0065]).

Claim 11:

Karim teaches that the resin system comprises a ethylenically unsaturated component (paragraph [0097]).

Claim 12:

Karim teaches the use of acrylates, methacrylates and vinyls (paragraph [0075]).

Claims 13 and 14:

Karim teaches the use of nanoscopic particulate filler materials (paragraph [0101]).

Claims 15 and 16:

Karim teaches the use of free radical or photo- or thermal initiators (paragraph [0110]).

Claim 17:

Karim teaches the use of a viscosity modifier (paragraph [0127]).

Claim 18:

Karim teaches the use of a surfactant (paragraph [0119]).

Claim 19:

Karim teaches that the hardenable material can be used in a variety of different dental applications including crowns (paragraph [0132]).

Freilich teaches that the dental mill blanks can be used for a variety of dental purposes (col. 13, lines 13-18).

Claims 20, 21 and 24-27:

Freilich teaches processing the hardened dental appliance in a variety of ways including polishing, which is to be considered a form of machining (col. 12, lines 31-34; col. 13, lines 9-13).

Claims 22-23:

Freilich teaches machining with a CAD/CAM device (col. 8, line 36-col. 9, line 2).

***Response to Arguments***

5. Applicant's arguments with respect to claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher M. Koehler whose telephone number is (571) 272-3560. The examiner can normally be reached on Mon.-Fri. 7:30A-4:00P.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached on (571) 272-4526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 3726

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
